Using Outcomes Weighting in PT Pro

If using **Outcomes Weighting** as your method of Grade Calculations, <u>ensure that the Attribute is set to **Specific Weights**</u>, otherwise student grades will not be properly calculated. (Grade calculations are configured by navigating to **Settings** > **Traditional Grade Calculations**). When the Attribute is not set to Specific Weights, when learner profile descriptors and/or skills descriptors are entered in your gradebook, these scores will significantly lower student grades.
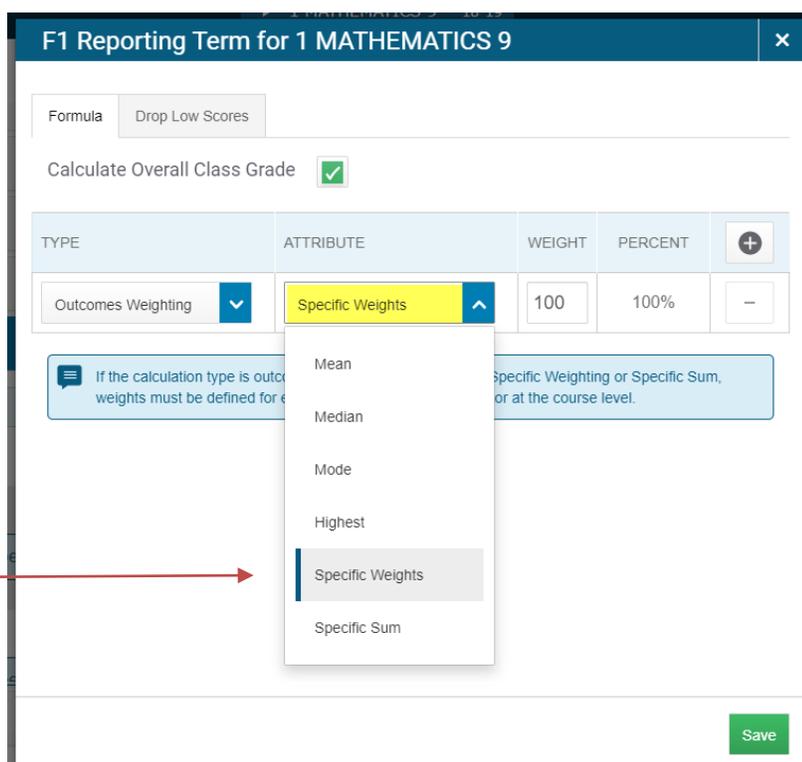

Choosing Specific Weights as the Attribute will ensure that only the outcomes will be considered in the grade calculation.

As well, when using Outcomes Weighting, confirm the settings on the **Outcomes Grade Calculations** page to ensure that outcome grades are being calculated as intended.
